

# Quick Release Injection Molded Wheels

## The advantages of our patented Quick Release Snap-on wheel include:

**Safety:** Our tool-less design eliminates the need for sharp picks or awls normally used in removing snap-on wheels.

**100% Compatibility:** Fully compatible with all industry standard snap-on axle designs.

**Integrated Spacers:** To simplify your packaging and assembly, we can mold your desired spacer length into your wheels.

**Fast Installation:** Snap-on wheels are shipped fully assembled so they can install in seconds by simply snapping the wheel onto a pre-machined axle. You will save valuable time and labor.

**Easy Removal:** The release tab is securely located on the inside of the wheel. It is coated black to blend with the wheel and thoughtfully positioned to fit the overall design. This assures a simple, but not obvious, removal system. No tools are required. Press and hold down the release tab as you slide the wheel off the axle.

**Rust Proof Construction:** Snap-on wheels hold up under the toughest conditions using stainless steel components.

**Other:** Wheel and axle diameter, colors and wheel load rating can be customized to meet your requirements.

Our patented injection molded wheels are manufactured using exceptionally strong and impact resistant plastics. We guarantee a long service life, and back our wheels with a ten year 100% warranty against defects in material or workmanship. You will enjoy years of trouble-free operation while substantially reducing expensive service calls and time consuming warranty claims.

Simplify your wheel assembly with the safest and most versatile wheel in the market. Field service technicians will be more efficient since they will not be slowed by misplaced or forgotten tools.

Quick Release Dura Snap Lock® with Pin & Spring

## Snap-on for Pre-machined Axles

Designed for industrial or residential roll-out carts with pre-machined axles, our patented line of snap-on wheels are available for all industry diameter grooved axles. Our unique wheels attach to this type of axle with simple hand pressure. The snap-on lock is available with our stainless steel pin and spring design.
